1 Data Scraping

I would be interested in scraping data from the UN, primarily about immigration. I would also like to scrape data from the NHL on player stats. I guess financial market data could be cool, but I don't want to be an investment banker because I don't want to die of a cocaine overdose.

2 PS4 Questions

1. The class of each is Data.Frame and SparkR, respectively.

2. It does not work because there is something that is not "inherent" to that class of dataframe–that class is probably a different type of data than what that command can read.

3. It does not work because of the same error message, so I would imagine the error occurred for the same reason.
